Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
B cell'associated surface molecule CD40, long splice form - mouse C; Species: Mus musculus (house mouse)
C; Species: Mus musculus (house mouse)
C; Date: 18-Jun-1993 #sequence_revision 18-Nov-1994 #text_change 17-Nov-2000
C; Accession: A46476, A46515
R; Torres, R.M.; Clark, E.A.
J. Immunol. 148, 620-626, 1992
A; Title: Differential increase of an alternatively polyadenylated mRNA species of mur A; Reference number: A46476; MUID:92105763
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A; Residues: 1-287, LV <GRI>

                                          This is the amino acid sequence of the mutanase enzyme PT box, which decomposes the alpha-1,3 glucoside bond of mutan. The mutanase enzyme is used in the method of the invention for prevention and removal of plaque and bacteria on teeth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New fungal (hemi)cellulose degrading enzymes - for prodn. of 11q. fuel gas and feed protein, have specified carbohydrate binding domain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                 Sequence of a peptide which is part of the heavy (H) chain (CH3) of an
                                                                                                                                                                                                                                                                                                                                                                        A novel immunoglobulin (Ig) is claimed which comprises two heavy (H) polypeptide chains sufficient for the formation of a complete antigen binding site or several such chains. The Ig is devoid of light (L) polypeptide chains. The Ig may be obtd. from prokaryotic cells, esp. E. coli, by: cloning a DNA or cDNA sequence coding for the VH domain of an Ig devoid of L chains obtainable from e.g. lymphocytes of Camelids; recovering the cloned fragment after conty. The Spe site having the sequence in AAO44383; cloning the recovered fragment is a vector; transforming host cells; and recovering the expression product of the VHH coding sequence. A nucleotide encoding the peptides in AAR49721-24 is claimed.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This 2-chain Ig molecule lacks any light chains. The Ig has e.g. improved solubility and aggregate much less than heavy chains of 4-chain 19s. The Igs can be used normally for e.g. diagnosis, therapy, in vaccines, for isolation and purification of antigens and in the production of anti-idiotype antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                        New isolated immunoglobulin molecules devoid of light polypeptide chains - consisting of heavy polypeptide chains only, obtd. from Camelid serum, for use as antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .

                                                                                                                                                                                                                                                                                                            ij
                                                                                                                                  The invention relates to novel synthetic genes for plant gums. A new approach is described to the production of hydroxyproline-rich glycoproteins (RRGPS). repetitive proline-rich proteins (RPRPS) and arabino-galactan proteins (ARPS). Synthetic genes comprising a nucleic acid encoding the peptide (AAY01267) can be engineered for the production of repetitive glycopeptide modules in calls. The invention provided a new approach to the problem of producing plant gums that is not dependent on environmental factors and greatly simplifies the production of a variety of naturally occurring gums as well as designer
                                                                                                                                                                                                                                                                                                                                                                                                                                     Peptide #5770 encoded by probe for measuring cervical gene expression

The present invention relates to human single exon nucleic acid probes (SENP: see AAIIO068-AAI20459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                       measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                                                                                                                                                                                                                                       Note: The sequence data for this patent did not form part of the printer specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Peptide #6169 encoded by probe for measuring placental gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a retroviral vector particle (RVP1), whating a modified retroviral envelope polypeptide which includes the hypervariable polyproline (HP) region modified to include a heterologous protein or peptide. Retroviral vectors made targetable by modification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             of the HP region enable the delivery of desired genes to a variety of cell types. Unlike prior art modifications in the receptor binding region, the particle does not disrupt envelope structure to impair folding, processing, and incorporation of the envelope protein. The present sequence represents an amphotropic hypervariable polyproline region truncated peptide from the present invention.

The present sequence is given in a specification relating to isolated human proteins designated INTERCEPT 217, INTERCEPT 297, TANGO 292, TANGO 325, TANGO 321 and TANGO 332. These proteins are useful as modulating agents or as targeting agents for developing agents to regulate callular processes e.g. growth, proliferation, survival, differentiation and activity of human tissues. Diseases which can be diagnosed, prevented and treated by administration of these polypeptides, their nucleic acids and modulators include cancers, inflammatory adsorders, cardiac disorders e.g. arrhythmia and skin disorders e.g. for providers, cardiac disorders e.g. arrhythmia and skin disorders e.g. provides; cancers in a host cell in gene therapy applications.

Antisense molecules or ribozymes can be used to inhibit expression cell the proteins in target cells. Fragments of the nucleic acid molecules encoding the isolated proteins are used as hybridisation probes and as polymerase chain reaction (PCR) primers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1;

                                                                                                                                                                                 (SOD monomer - 1gA - SOD monomer)x or (SOD monomer - 1gA - SOD monomer)x = a 10-100 amino acid long segment of an immunoglobulin hinge region
A Cu/Zn superoxide dismutase (SOD) polymer of SOD units of at least 2 SOD monomers covalently coupled, carboxy terminus to amino terminus, to each other by a polypeptide spacer of at least 3 amino acids is claimed. The polymers are of formula
                                                                                                                                                                                                                                                                                                                                                                        AAN80435 was used to make pSODCFISODHA1 encoding bacterial expression spacer-linked human SOD monomers. AAN80435 encodes human IgA1 hinge region beginning at AA residue 226 to avoid the Cys 225 residue with BamHI and NocI sites at its ends. The SOD polymers have an extended circulatory life and retain the activity of SOD. The cloning and sequencing of human SOD (hSOD) cDNA and prodn. of hSOD in bacteria and yeast are described in EP-138111.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Peptide #4543 encoded by probe for measuring placental gene expression.
                                                                                                      Peptide #4431 encoded by probe for measuring cervical gene expression.
                                                                                                                                                 Probe; human; microarray; gene expression; cervical epithelial cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mismatches 10; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Probe; microarray; human; placenta; antenatal diagnosis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ٠:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAY 65438 represent the EST-related proteins. AAY 64651 to AAX 65438 represent the EST-related proteins corresponding to AAX 4325 to AAX 4352. The 5' ESTS can be used for producing scereted human gene products. They can be used to identify and isolate 5' untranslated regions (UTRS) and upstream regulatory regions which control the location, development stage, rate, and quantity of protein synthesis, as well as stability of mRNA. The ESTS are also useful as probes for chromosome mapping, and to obtain full length conn. The ESTS can also be used in forensic procedures to identify individuals, or in diagnostic procedures to identify individuals, or in resulting from abnormal gene expression. The products may also be used in gene therapy protocols. The nucleic acids encoding signal peptides can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypeptide into a cell. The proteins encoded by the EST sequences may be useful in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              treating a variety of human conditions. Secreted proteins have therapeutic value, and the identification of new secreted proteins is valuable. AAZ42249 to AAZ42264 and AAX64644 to AAY64650 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel secreted protein 5' expressed sequence tag sequences used in diagnostic, forensic, gene therapy, and chromosome mapping procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                           Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human placenta -

                                            Zhang W., Wan T., Cao X.;
Submitted (MAY-1999) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: RECEPTOR FOR TMFSF14. INVOLVED IN LYMPHOCYTE ACTIVATION.
--- PUNCTION: MIPOPRANT ROLE IN HSV PATHOGENESIS BECAUSE IT ENHANCED.
THE ENFRY OF SEVERAL WILDTYPE HSV STRAINS OF BOTH SEROTYPES INTO
CHO CELLS, AND MEDIATED HSV ENTRY INTO ACTIVATED HUMAN T CELLS.
                                                                                                                                                                                                    SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN (PROBABLE).
TISSUE SPECIFICITY: WIDELY EXPRESSED, WITH THE HIGHEST EXPRESSION
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                92 ECLSC-----GSRCSSDQVETQACTREQNRICTCRPGWYCALSKQEGCRLCAPLRKCR 144

Immunol. 149:3921-3926(1992).

-i- FUNCTION: RECEPTOR A CYTOKINE LIGAND KNOWN AS CD40L.

-i- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-i- SUBCELLULAR: CONTAINS A LA-NGFR/TNFR-TYPE CYSTEINE-RICH REGION.
                                                                                                                                                                                                                                                     Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
